Innovative Technik aus einer Hand

NX Dongle

Now you are always on the right channel

NX Dongle

Automatic channel switching:

In a large radio network, operation often requires more than one channel. Not switching the channel in due time means being not available at all.

NX Dongle is the solution! Equipped with NX Dongle, any Kenwood NXx20 series radio can switch the channel based on its position easily and effectively.

Technical data:

- 4 MByte flash memory
- μ Controller up to 16MHz
- power supply 3..16V via system connector
- 15 pol HD system connector according to specification of Kenwood 720 series
- interface to radio: serial
- interface to PC: USB
- size: 30x37x18 mm

Geofencing function:

If a vehicle leaves a defined area, the NX-Dongle equipped radio can automatically send an alarm message with its current position to the control station.

Being a system provider, we would like support you with planning of your radio system and registration of the necessary frequencies. We also provide complete configuration and mounting of all devices.

Your advantages:

Ease of use

- extrem low installation cost
- intuitive configuration software
- very easy creation and programming of GPS-fields

Security

- reliable automatic channel switching
- definite channel also in very reflective zones (like cities)
- up to 1000 fields can be defined

Documentation

- optional positions log for several months
- optional event log for several months
